Introduction

Attached are amendments to the Standard Classification of Goods. They update the classification (previously updated to 1989) for use with data pertaining to 1990. The package consists of a list of the codes changed, a list of pages to be replaced and a set of replacement pages. A corresponding package was issued in February 1990 to update the classification to 1989. It was originally published for use with 1988 data.

The changes update the 1989 classification to reflect 1990 commodity data collected for imports (I), exports (E) and shipments (S) by manufacturers. There are two types of changes, errata of which there are 161 and other changes, of which there are 3,582. The errata correct errors discovered in the 1989 classification. The other changes update the classification to 1990. These changes are: deletions of obsolete classes, additions of new classes and changes in class titles or in the I, E or S flags which indicate the survey collecting data for a class. Most of the changes for 1990 are a consequence of the many changes to the Customs Tariff brought about by the agreement between Canada and the United States to let the import data collected by each country stand for the exports of the other country.

Errata are identified by dots on the replacement pages; other changes by vertical lines.

A problem in producing timely amendments for the Standard Classification of Goods is the scheduling difference between current surveys, such as those for monthly import and export statistics, for which data are produced on an ongoing basis during the reference year, and annual surveys, such as the Annual Survey of Manufactures, for which data are collected after the reference year is over. Export and in large part import statistical classes are set some few months before the beginning of the reference year. However, the Canadian Customs Tariff, which is an integral part of the coding system used to collect import data, changes continuously throughout the reference year. These changes, up to May 1990 have been accounted for, where possible, in the attached amendments. Shipments classes, on the other hand, may not be set until a few months before the end of the reference year.

The Standard Classification of Goods, catalogue 12-580E is published by Standards Division, Shaila Nijhowne, Director. It is available through Publications Sales, Statistics Canada, Ottawa, K1A 0T6, telephone 1-800-267-6677.

Originating primarily from data collectors, these amendments were assembled and edited by a team in Standards Division coordinated by Frank Pope. PREFACE

The Standard Classification of Goods is the standard used by Statistics Canada to collect commodity data and to uniquely identify such data in data banks. It is based upon an international standard, the Harmonized Commodity Description and Coding System.

This first edition of the Standard Classification of Goods resulted from the identification and reconciliation of requirements for Canadian statistics about imported, exported, and manufactured goods. It provides users of commodity data with information on the classification and level of detail for which data are collected in these three major surveys. The Classification also provides a structure for the collection of commodity data at different levels of detail. The Standard Classification of Goods replaces the Standard Commodity Classification, which was first published in 1959.

The contents of this publication consist of an introductory text, a description of the Standard Classification of Goods (including general rules for interpretation and a list of sections and chapters), the Classification, and a concordance. The introductory text provides information about the origin of the new classification, and the textual description of the Classification provides information about its salient features. The interpretive rules provide guidance where the classification descriptions and notes are not sufficient. An overview of the Classification is provided by the list of sections and chapters. Since an important consequence of changing a classification standard is the resultant break in statistical series, a concordance is provided to show the relationship between the new and old classifications for the three major commodity series.

The Standard Classification of Goods is published by the Standards Division, Shaila Nijhowne, Director. This extension of the Harmonized Commodity Description and Coding System was coordinated and developed by Frank Pope, assisted by the staff of Standards Division. Subject matter support from other Divisions of Statistics Canada, particularly the International Trade and Industry Divisions, is gratefully acknowledged. The development of the Classification was started under Anna Ansmits, former Director, Standards Division.

Introduction

Attached are amendments to the 1988 Standard Classification of Goods, consisting of a list of the codes changed and a set of replacement pages. This is the first update to the SCG since its introduction in November 1988. It is expected that updates will be required on an annual or more frequent basis.

The changes update the 1988 classification to reflect 1989 commodity data collected for imports (I), exports (E) and shipments (S) by manufacturers. There are two types of changes, errata of which there are 181 and other changes, of which there are 838. The errata correct errors discovered in the 1988 classification. Most refer to changes in the status of the S code which were required to compile data for the 1988 Annual Survey of Manufactures. The other changes update the classification to 1989. These changes are: deletions of obsolete classes, additions of new classes and changes in class titles or in the I, E or S flags which indicate the survey collecting data for a class. Errata are identified by dots on the replacement pages, other changes by vertical lines.

A problem in producing timely amendments for the Standard Classification of Goods is the scheduling difference between current surveys, such as the monthly import and export statistics, for which data are produced on an ongoing basis during the reference year, and annual surveys, such as the Annual Survey of Manufactures, for which data are collected after the reference year is over. Import and export statistical classes are set some few months before the beginning of the reference year while the final shipments classes may not be set until a few months before the end of the reference year.

The Standard Classification of Goods, catalogue 12-580E is published by Standards Division, Shaila Nijhowne, Director. It is available through the Publications Division of Statistics Canada.

For additional information with respect to the classification or amendments, please contact Mr. Frank Pope, Standards Division, Statistics Canada, 11th floor, Jean Talon Building, Ottawa, Ontario, K1A 0T6, Telephone: 613-951-3461

THE STANDARD CLASSIFICATION OF GOODS

a) Structure

The HS (and thus the SCG) was designed for the classification of goods on the basis of their physical characteristics, in the sense that one should be able to apply objective criteria to correctly classify a good or verify its classification, by examining it or asking a laboratory to test its physical or chemical properties. The corollary is that certificates of origin or market are not required. The use of physical characteristics was thought to be the best way of getting reliably coded data.

The main objective in developing the SCG was to add a level of commodity detail to the HS structure. This was necessary because the detail in the HS reflects the commodities that were significant in international trade during the 1970s. Additional national requirements for commodity statistics, particularly for commodities that are significant mainly in domestic production, had to be added to the HS. In developing the SCG, it was important to identify commodities that are significant for analytical purposes but are defined in such a way that they can be reported from records kept by respondents or coded from documentation that travels with the goods.

The SCG is presented as a hierarchy of chapters (two-digit codes), headings (four-digit codes) and subheadings (six-digit codes and eight-digit codes), organized primarily by component material, beginning with crude products and proceeding through further stages of refinement, then mixtures and products made from a variety of materials. Numeric codes are used. A count of these codes, by level, is given in the following table:

SCG Count, By Level

Two-digit codes	97
Four-digit codes	1,241
Six-digit codes	5,019
Eight-digit codes	12,497

At the two-, four- and six-digit level, the list of goods is exhaustive. To obtain an exhaustive list at the eight-digit level, it is necessary to add those six-digit subheadings that have not been extended to the eight-digit level. The number of lowest-level codes thus obtained is 14,578.

In the classification, commodity descriptions are sometimes employed at the fifth and seventh levels to simplify the presentation. Codes have been assigned to the seven-digit level, because some of them were required for data collection.

A system of dashes is employed to clarify the hierarchy. Two dashes and four dashes have been assigned to six- and eight-digit subheadings, respectively. One dash or three dashes have been assigned to intermediate levels.

The structure of the SCG can be illustrated by the example of Sockeye salmon in airtight

containers:

16	chapter		Preparations of meat, of fish or of crustaceans, molluscs or other aquatic invertebrates
16.04	heading		Prepared or preserved fish; caviar and caviar substitutes prepared from fish eggs
	subheading	(one dash)	Fish, whole or in pieces, but not minced
1604.11	subheading	(two dashes)	Salmon
1604.11.1	subheading	(three dashes)	In airtight containers
1604.11.14	subheading	(four dashes)	Sockeye

Sometimes the coding structure is simpler, as in Cocoa beans, whole or broken, raw or roasted:

18	chapter		Cocoa and cocoa preparations
18.01	heading		Cocoa beans, whole or broken, raw or roasted
1801.00	subheading	(two dashes)	Cocoa beans, whole or broken, raw or roasted

In this latter case, the heading is repeated at the subheading level, and "00" is added to the code, but in the SCG, the heading description is not again repeated at the eight-digit level (i.e., 1801.00.00). This is because, for many headings there was no need to create further subheadings for data collection below the six-digit level. The addition of a significant number of duplicated six-digit-level descriptions (as illustrated above for the four-digit level) would have added considerably to the length of the text of the Classification.

b) Terminology and spelling

The terminology and spelling in the HS generally follows usage in England or France. The HS Convention calls for application of the HS descriptions exactly as written in English or French, to avoid confusion in comparing statistics. If, for example, the description of a class published by a given country differs from the HS description, users might suspect that the class content has been altered, even though the code is the same. The HS convention (Article 3) does, however, provide some flexibility, by allowing a country to make "...textual adaptations as may be necessary to give effect to the Harmonized System in its domestic law". Countries whose official language is neither English nor French have more freedom in writing descriptions. The application of HS descriptions in Canada creates some difficulties, as Canadian usage of the English and French languages is somewhat different from that in England or France, which were considered as language authorities, respectively, when the HS descriptions were prepared. The concessions (at the six-digit level) to Canadian practice were as follows:

- "aluminium" in the HS is converted to "aluminum" in the SCG
- "tyre" is converted to "tire"
- "trucks" in heading 86.03 has been qualified as "trucks (cars)"
- "wagons" in heading 86.06 has been qualified as "wagons (freight cars)"
- "golf cars" in subheading 8703.10 has been qualified as "golf cars (carts)"
- selected HS terms in heading 87.05 have been replaced by Canadian terms - i.e.,

- "breakdown lorries" by "wreckers", "crane lorries" by "mobile cranes", "concrete-mixer lorries" by "concrete-mixers", "road sweeper lorries" by "road sweepers", and "spraying lorries" by "spraying vehicles"
- "invalid carriages" has been replaced by "wheelchairs" (87.13 and 8714.20)
- the period at the end of four-digit descriptions and the colon at the end of subheadings have been dropped, and there are some other minor differences.

Beyond the six-digit level, the intention was to be consistent with HS subheading descriptions, but spelling tends to reflect that of the author of the description. Furthermore, a set of alternative descriptions has been developed for use with industry questionnaires where HS terminology was deemed inadequate to elicit the required information. The issue calls for a consensus on Canadian terminology and spelling for commodity descriptions. Standards Division intends to address this issue before the next printing of the SCG. There is also a requirement for shortened descriptions that are suitable for use in tables and computer printouts.

c) Units of measure

At this time, the SCG does not show a unit of measure for each commodity class. These units, however, are useful, and most commodity surveys collect data for both units of measure and value. Although decisions have been made about the most appropriate unit of measure for most commodities, the remaining problem cases are difficult to resolve. It is difficult, for example, to determine whether weight or number is the most useful unit of measure for some commodities. As well, some commodities may require two units of measure (e.g., weight and area are complementary units of measure for textile fabrics).

d) Industry of origin

Another objective of the SCG is to define each commodity class in such a way that it can be related to its principal industry of origin. Monthly production for commodities grouped by industry can be used as a crude indicator of change in industry output, value added, demand for materials, and capacity utilization, measures which are normally available only from annual industry reports that are published some time later. Furthermore, establishments are usually assigned to industries according to the products they produce. By using a commodity by industry concordance (which matches each of the lowest-level SCG codes to its industry of origin), it is possible to classify establishments to industries according to their reported products, and to verify the industry code for a given establishment when its annual statistical report is being processed. Although, in fact, some commodities are not principally produced by only one industry and many are also produced as secondary products by other industries, the relationship holds true sufficiently well that the assignment of commodities to their industry of origin is a useful tool. Accordingly, a concordance linking each of the lowest-level SCG codes (the 14,578 six- or eight-digit codes below which there are no further categories) to its industry of origin (at the four-digit SIC level) has been prepared.

e) Interpretive rules and legal notes

The SCG is supported by a formal set of interpretive rules (see page 19) and legal notes (section and chapter notes, as contained in the Classification). These rules and notes are formal, in that countries signing the convention to implement the HS bind themselves to follow them, and any disputes over an HS-based classification of a commodity would be

argued in court on their basis. The rules and notes are also applicable to the classes at the seven- and eight digit levels.

f) Current coverage

The SCG currently identifies the level of data collected in surveys of imports, exports and shipments by manufacturers. The identification of goods associated with each of these surveys illustrates the uniqueness of each universe and the manner in which they can be accommodated within one general classification. Furthermore, the classes selected reflect the demand for data and their availability, questionnaire or coding manual design, method of data collection, and confidentiality of the information. The alphabetic codes used to identify the present level of data collection have the following meanings:

Imports (I)

These codes are related to the commodities for which import data are collected for 1988. The implementation of the HS for import statistics differs from that of the other two major series, because import statistics are coded according to the joint tariff-statistical code shown in the Canadian Tariff and Import Statistics Nomenclature (CTISN). In the CTISN code, the six-digit HS component is followed by two digits for tariff purposes, then two more digits for statistical purposes; the full ten digits are thus required to identify a specific commodity. Where statistical requirements are incompatible with the tariff structure, identical statistical breakouts are required from two or more tariff classes to facilitate regrouping of data to meet the statistical requirements. The SCG, having an eight-digit code and being a statistical classification, cannot adopt all tariff codes; therefore, it identifies import classes that are identical to tariff classes or to groupings of tariff classes. A concordance is available to link the codes of the CTISN to those of the SCG.

Exports (E)

These codes appear in the 1988 Canadian Export Classification.

Shipments (S)

These codes apply to commodity data obtained from the questionnaires for the 1988 Annual Survey of Manufactures. They apply to both input data (energy and materials used), and to output data (shipments). They also apply to some of the subannual surveys of manufacturing production.

Data are collected for each of imports, exports and shipments for about 300 codes at the seven- or eight-digit level, in addition to most six-digit codes. This is the maximum potential detail for which estimates of domestic markets can be calculated (imports plus shipments minus exports). As other surveys are brought into the SCG, the commodities they cover will also be identified by alphabetical codes. In this way, it will be possible to adapt the SCG to disparate commodity universes, while maintaining an integrated bank of data. The three surveys presently covered are the key ones for market analysis and input-output models.

The definition of the "Other" classes differs according to the survey identified. When more

classes are identified in one survey than another, the "Other" class will not be comparable.

In spite of the large number of commodity classes, the commodity detail is insufficient to meet all requirements. This may be due to lack of space within the relevant range of codes or to the necessity to accommodate a different classification structure. In such cases, additional digits are allowed at the discretion of the subject-matter Divisions. At this time, for example, nine- and ten-digit codes for use in the Annual Survey of Manufactures have been provided for in the SCG file.

g) Updating

It is planned to maintain the SCG by an annual release of updating information and periodic reprints of the publication. Updates will come from a number of sources, including HS changes, incorporation of new surveys into the SCG, changes in commodity detail covered by surveys, and basic commodity classification research. The HS is maintained by a committee composed of representatives from all signatories to the HS convention. This committee meets regularly at the offices of the Customs Co-operation Council in Brussels, Belgium. It is supported by a permanent secretariat. Proposals for HS changes are submitted to the committee through national representatives. Normally, three or four years would elapse between the time a proposal is presented to the committee and the time it would affect the collection of data, and thus the SCG. Also, as new surveys are incorporated into the SCG, a process of integration takes place, in which commodities at the appropriate level of the SCG are selected and negotiations are undertaken, in order to modify the seventh and eighth digits of the SCG to reflect the best general arrangement. Such changes will be included in the relevant annual supplement. In addition, towards the end of each calendar year, a series of meetings will be called by Standards Division, to discuss changes in commodity detail covered by the various surveys. From these meetings, changes to the SCG will be made to reflect the latest general requirements for commodity data, and survey coverage for the next data year will be settled. Finally, apart from the *ad hoc* type of requests associated with survey coverage, there is a basic requirement for commodity classification research that considers the nature of the commodities on the market, requirements for data and modifications to the classification structure. Some significant portion of the SCG should undergo such scrutiny annually, from which well-documented proposals for changes could emerge.

h) HS implementation, by survey

The SCG is intended as a standard for application to all commodity surveys conducted by Statistics Canada. The following table provides a list of surveys actually or potentially affected:

Commodity Surveys Eligible for HS Implementation

<u>Survey</u>	<u>Extent of Survey Commodity Coverage</u>	<u>HS Implementation</u>
Imports	13,130 categories	January 1988
Exports	5,682 categories	January 1988

Annual Survey of Manufactures (240 different industry questionnaires)	8,542 categories of shipments or materials	1988 data year
Current production, for selected industries	varies by industry	about half are HS-based for 1988 data
Water transport	currently 90 categories	planned for 1989 data
Road transport	currently about 200 categories	planned for 1989 data
Rail transport	currently about 300 categories	planned for 1989 data
Dairy product surveys	varies by industry	HS-based definitions planned for 1990
Other Agriculture Division surveys	varies by industry	HS-compatible data planned for 1990
Family expenditure surveys	over 300 categories of goods	next surveys (1990) should be HS-based
Consumer Price Index	over 300 categories of goods	1990 updating should be HS-based

i) Concordances

Concordances are prepared to assist users of commodity statistics to link historical series. The concordance included in this publication links HS codes to the three principal commodity series for which data were collected for the last time on an SCC base (i.e., for 1987). A number of SCC-based codes in the concordance relate to more than one HS code. In these cases, each SCC-based code is repeated wherever applicable. To allocate SCC-based statistics to HS codes, however, requires knowledge of the proportion of each SCC-based code that relates to each HS code. These proportions have to be calculated for the particular series or class of goods being converted. The concordance included in this publication is intended only to give a detailed perspective on the relationship between the HS and the three major SCC-based series.

To further assist in comparing classifications, the following concordances (or their reverse) can be ordered from Standards Division, in various forms:

SCG x ICC (1987)
 SCG x CITC (1987)
 SCG x XCC (1987)

SCG x PCG (1987)
SCG x CTISN (1988)
SCG x SITC (Rev. 3)
SCG x SIC (1980)
HS x SIC (1980)

GENERAL RULES FOR THE INTERPRETATION OF THE HARMONIZED SYSTEM

Classification of goods in the Nomenclature shall be governed by the following principles:

1. The titles of Sections, Chapters and sub-Chapters are provided for ease of reference only; for legal purposes, classification shall be determined according to the terms of the headings and any relative Section or Chapter Notes and, provided such headings or Notes do not otherwise require, according to the following provisions:
2. (a) Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), presented unassembled or disassembled.
- (b) Any reference in a heading to a material or substance shall be taken to include a reference to mixtures or combinations of that material or substance with other materials or substances. Any reference to goods of a given material or substance shall be taken to include a reference to goods consisting wholly or partly of such material or substance. The classification of goods consisting of more than one material or substance shall be according to the principles of Rule 3.
3. When by application of Rule 2(b) or for any other reason, goods are, *prima facie*, classifiable under two or more headings, classification shall be effected as follows:
 - (a) The heading which provides the most specific description shall be preferred to headings providing a more general description. However, when two or more headings each refer to part only of the materials or substances contained in mixed or composite goods or to part only of the items in a set put up for retail sale, those headings are to be regarded as equally specific in relation to those goods, even if one of them gives a more complete or precise description of the goods.
 - (b) Mixtures, composite goods consisting of different materials or made up of different components, and goods put up in sets for retail sale, which cannot be classified by reference to 3(a), shall be classified as if they consisted of the material or component which gives them their essential character, insofar as this criterion is applicable.
 - (c) When goods cannot be classified by reference to 3(a) or 3(b), they shall be classified under the heading which occurs last in numerical order among those which equally merit consideration.
4. Goods which cannot be classified in accordance with the above Rules shall be classified under the heading appropriate to the goods to which they are most akin.
5. In addition to the foregoing provisions, the following Rules shall apply in respect of the goods referred to therein:

- (a) Camera cases, musical instrument cases, gun cases, drawing instrument cases, necklace cases and similar containers, specially shaped or fitted to contain a specific article or set of articles, suitable for long-term use and presented with the articles for which they are intended, shall be classified with such articles when of a kind normally sold therewith. This Rule does not, however, apply to containers which give the whole its essential character;
 - (b) Subject to the provisions of Rule 5(a) above, packing materials and packing containers presented with the goods therein shall be classified with the goods if they are of a kind normally used for packing such goods. However, this provision does not apply when such packing materials or packing containers are clearly suitable for repetitive use.
6. For legal purposes, the classification of goods in the subheadings of a heading shall be determined according to the terms of those subheadings and any related Subheading Notes and, *mutatis mutandis*, to the above Rules, on the understanding that only subheadings at the same level are comparable. For the purposes of this Rule the relative Sections and Chapter Notes also apply, unless the context otherwise requires.

Introduction

Attached are amendments to the Standard Classification of Goods. They update the classification (previously updated to 1990) for use with data pertaining to 1991. The package consists of a list of the codes changed, a list of pages to be replaced and a set of replacement pages. Corresponding packages were issued in February 1990 and January 1991 to update the classification to 1989 and 1990 respectively. It was originally published for use with 1988 data.

The changes update the 1990 classification to reflect 1991 commodity data collected for imports (I), exports (E) and shipments (S) by manufacturers. There are two types of changes, errata of which there are 45 and other changes, of which there are 712. The errata correct errors discovered in the 1990 classification. The other changes update the classification to 1991. These changes are: deletions of obsolete classes, additions of new classes and changes in class titles or in the I, E or S flags which indicate the survey collecting data for a class. Most of the changes for 1991 are a consequence of changes to the Customs Tariff.

Errata are identified by dots on the replacement pages; other changes by vertical lines.

A problem in producing timely amendments for the Standard Classification of Goods is the scheduling difference between current surveys, such as those for monthly import and export statistics, for which data are produced on an ongoing basis during the reference year, and annual surveys, such as the Annual Survey of Manufactures, for which data are collected after the reference year is over. Export and in large part import statistical classes are set some few months before the beginning of the reference year. However, the Canadian Customs Tariff, which is an integral part of the coding system used to collect import data, changes continuously throughout the reference year. These changes, up to January 1, 1991 have been accounted for, where possible, in the attached amendments. Shipments classes, on the other hand, may not be set until a few months before the end of the reference year. Note that "S" denotes a class applicable to a survey of manufactures and not necessarily data. These classes may appear under shipments or materials used and on annual or current surveys.

The Standard Classification of Goods, catalogue 12-580E is published by Standards Division, Shaila Nijhowne, Director. It is available through Publications Sales, Statistics Canada, Ottawa, K1A 0T6, telephone 1-800-267-6677.

Originating primarily from data collectors, these amendments were assembled and edited by a team in Standards Division coordinated by Frank Pope. For additional information with respect to the classification or amendments, please contact Gilbert Elliot, Standards Division, Statistics Canada, 8th floor, Jean Talon Building, Ottawa, Ontario, K1A 0T6, Telephone: 613-951-3464.

Chapter 16

PREPARATIONS OF MEAT, OF FISH OR OF CRUSTACEANS,
MOLLUSCS OR OTHER AQUATIC INVERTEBRATES

Notes.

1. This Chapter does not cover meat, meat offal, fish, crustaceans, molluscs or other aquatic invertebrates, prepared or preserved by the processes specified in Chapter 2 or 3.
2. Food preparations fall in this Chapter provided that they contain more than 20% by weight of sausage, meat, meat offal, blood, fish or crustaceans, molluscs or other aquatic invertebrates, or any combination thereof. In cases where the preparation contains two or more of the products mentioned above, it is classified in the heading of Chapter 16 corresponding to the component or components which predominate by weight. These provisions do not apply to the stuffed products of heading No. 19.02 or to the preparations of heading No. 21.03 or 21.04.

Subheading Notes.

1. For the purposes of subheading No. 1602.10, the expression "homogenised preparations" means preparations of meat, meat offal or blood, finely homogenised, put up for retail sale as infant food or for dietetic purposes, in containers of a net weight content not exceeding 250 g. For the application of this definition no account is to be taken of small quantities of any ingredients which may have been added to the preparation for seasoning, preservation or other purposes. These preparations may contain a small quantity of visible pieces of meat or meat offal. This subheading takes precedence over all other subheadings of heading No. 16.02.
2. The fish and crustaceans specified in the subheadings of heading No. 16.04 or 16.05 under their common names only, are of the same species as those mentioned in Chapter 3 under the same name.

Notes.

1. This Chapter does not cover:

- a) Slag or similar industrial waste prepared as macadam (heading No. 25.17);
- b) Natural magnesium carbonate (magnesite), whether or not calcined (heading No. 25.19);
- c) Basic slag of Chapter 31;

- f) Copper, nickel or cobalt mattes produced by any process of smelting (Section XV).

2. For the purposes of headings Nos. 26.01 to 26.17, the term "ores" means minerals of mineralogical species actually used in the metallurgical industry for the extraction of mercury, of the metals of heading No. 28.44 or of the metals of Section XIV or XV, even if they are intended for non-metallurgical purposes. Headings Nos. 26.01 to 26.17 do not, however, include minerals which have been submitted to processes not normal to the metallurgical industry.

3. Heading No. 26.20 applies only to ash and residues of a kind used in industry either for the extraction of metals or as a basis for the manufacture of chemical compounds of metals.

**MINERAL FUELS, MINERAL OILS AND PRODUCTS
OF THEIR DISTILLATION; BITUMINOUS SUBSTANCES;
MINERAL WAXES**

Notes.

1. This Chapter does not cover:
 - a) Separate chemically defined organic compounds, other than pure methane and propane which are to be classified in heading No. 27.11;
 - b) Medicaments of heading No. 30.03 or 30.04; or

2. References in heading No. 27.10 to "petroleum oils and oils obtained from bituminous minerals" include not only petroleum oils and oils obtained from bituminous minerals but also similar oils, as well as those consisting mainly of mixed unsaturated hydrocarbons, obtained by any process, provided that the weight of the non-aromatic constituents exceeds that of the aromatic constituents.

However, the references do not include liquid synthetic polyolefins of which less than 60% by volume distils at 300 °C, after conversion to 1,013 millibars when a reduced-pressure distillation method is used (Chapter 39).

Subheading Notes.

1. For the purposes of subheading No. 2701.11, "anthracite" means coal having a volatile matter limit (on a dry, mineral-matter-free basis) not exceeding 14%.
2. For the purposes of subheading No. 2701.12, "bituminous coal" means coal having a volatile matter limit (on a dry, mineral-matter-free basis) exceeding 14% and a calorific value limit (on a moist, mineral-matter-free basis) equal to or greater than 5,833 kcal/kg.
3. For the purposes of subheadings Nos. 2707.10, 2707.20, 2707.30, 2707.40 and 2707.60, the terms "benzole", "toluole", "xylol", "naphthalene" and "phenols" apply to products which contain more than 50% by weight of benzene, toluene, xylene, naphthalene or phenols, respectively.

 3. Goods put up in sets consisting of two or more separate constituents, some or all of which fall in this Section and are intended to be mixed together to obtain a product of Section VI or VII, are to be classified in the heading appropriate to that product, provided that the constituents are:
 - a) having regard to the manner in which they are put up, clearly identifiable as being intended to be used together without first being repacked;
 - b) presented together; and
 - c) identifiable, whether by their nature or by the relative proportions in which they are present, as being complementary one to another.

Notes.

1. Except where their context otherwise require, the headings of this Chapter apply only to:
 - a) Separate chemical elements and separate chemically defined compounds, whether or not containing impurities;
 - b) The Products mentioned in (a) above dissolved in water;
 - c) The Products mentioned in (a) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for specific use rather than for general use;
 - d) The products mentioned in (a), (b) or (c) above with an added stabiliser necessary for their preservation or transport;
 - e) The products mentioned in (a), (b), (c) or (d) above with an added anti-dusting agent or a colouring substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for a specific use rather than for general use.
2. In addition to dithionites and sulphonylates, stabilised with organic substances (heading No. 28.31), carbonates and peroxocarbonates of inorganic bases (heading No. 28.36), cyanides, cyanide oxides and complex cyanides of inorganic bases (heading No. 28.37), fulminates, cyanates and thiocyanates, of inorganic bases (heading No. 28.38), organic products included in headings Nos. 28.43 to 28.46 and carbides (heading No. 28.49), only the following compounds of carbon are to be classified in this Chapter:
 - a) Oxides of carbon, hydrogen cyanide and fulminic, isocyanic, thiocyanic and other simple or complex cyanogen acids (heading No. 28.11);

 - a) Separate chemically defined organic compounds, whether or not containing impurities;
 - b) Mixtures of two or more isomers of the same organic compound (whether or not containing impurities), except mixtures of acyclic hydrocarbon isomers (other than stereoisomers), whether or not saturated (Chapter 27);
 - c) The products of headings Nos. 29.36 to 29.39 or the sugar ethers and sugar esters, and their salts, of heading No. 29.40, or the products of heading No. 29.41, whether or not chemically defined;
 - d) The Products mentioned in (a), (b) or (c) above dissolved in water;
 - e) The Products mentioned in (a), (b) or (c) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for specific use rather than for general use;
 - f) The products mentioned in (a), (b), (c), (d) or (e) above with an added stabiliser necessary for their preservation or transport;
 - g) The products mentioned in (a), (b), (c), (d), (e) or (f) above with an added anti-dusting agent or a colouring or odoriferous substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for specific use rather than for general use;
 - h) The following products, diluted to standard strengths, for the production of azo dyes: diazonium salts, couplers used for these salts and diazotisable amines and their salts.
2. This Chapter does not cover:
 - a) Goods of heading No. 15.04 or glycerol (heading No. 15.20);
 - b) Ethyl alcohol (heading No. 22.07 or 22.08);
 - c) Methane and propane (heading No. 27.11);
 - d) The compounds of carbon mentioned in Note 2 to Chapter 28;
 - e) Urea (heading No. 31.02 or 31.05);
 - f) Colouring matter of vegetable or animal origin (heading No. 32.03), synthetic organic colouring matter, synthetic organic products of a kind used as fluorescent brightening agents or as luminophores (heading No. 32.04) or dyes or other colouring matter put up in forms or packings for retail sale (heading No. 32.12);
 - g) Enzymes (heading No. 35.07);
 - h) Metaldehyde, hexamethylenetetramine and similar substances, put up in forms (for example, tablets, sticks or similar forms) for use as fuels, or liquid or liquefied-gas fuels in containers, of a kind used for filling or refilling cigarette or similar lighters, and of a capacity not exceeding 300 cm³ (heading No. 36.06);
 - i) Products put up as charges for fire-extinguishers or put up in fire-extinguishing grenades, of heading No. 38.13; ink removers put up in packings for retail sale, of heading No. 38.23; or
 - j) Optical elements, for example, of ethylenediamine tartrate (heading No. 90.01).
3. Goods which could be included in two or more of the headings of this Chapter are to be classified in that one of those headings which occurs last in numerical order.
4. In headings Nos. 29.04 to 29.06, 29.08 to 29.11 and 29.13 to 29.20, any reference to halogenated, sulphonated, nitrated or nitrosated derivatives includes a reference to compound derivatives, such as sulphohalogenated, nitrohalogenated, nitrosulphonated or nitrosulphohalogenated derivatives.

Nitro or nitroso groups are not to be taken as "nitrogen-functions" for the purposes of heading No. 29.29.

For the purposes of headings Nos. 29.11, 29.12, 29.14, 29.18 and 29.22, "oxygen-function" is to be restricted to the functions (the characteristic organic oxygen-containing groups) referred to in headings Nos. 29.05 to 29.20.
5. a) The esters of acid-function organic compounds of sub-Chapters I to VII with organic compounds of these sub-Chapters are

to be classified with that compound which is classified in the heading which occurs last in numerical order in these sub-Chapters.

- b) Esters of ethyl alcohol or glycerol with acid-function organic compounds of sub-Chapters I to VII are to be classified in the same heading as the corresponding acid-function compounds.
- c) Subject to Note 1 to Section VI and Note 2 to Chapter 28:
- 1) Inorganic salts of organic compounds such as acid-, phenol- or enol-function compounds or organic bases, of sub-Chapters I to X or heading No. 29.42, are to be classified in the heading appropriate to the organic compound; and
 - 2) Salts formed between organic compounds of sub-Chapters I to X or heading No. 29.42 are to be classified in the heading appropriate to the base or to the acid (including phenol- or enol-function compounds) from which they are formed, whichever occurs last in numerical order in the Chapter.
- d) Metal alcoholates are to be classified in the same heading as the corresponding alcohols except the case of ethanol and glycerol (heading No. 29.05).
- e) Halides of carboxylic acids are to be classified in the same heading as the corresponding acids.
6. The compounds of headings Nos. 29.30 and 29.31 are organic compounds the molecules of which contain, in addition to atoms of hydrogen, oxygen or nitrogen, atoms of other non-metals or of metals (such as sulphur, arsenic, mercury or lead) directly linked to carbon atoms.
- Heading No. 29.30 (organo-sulphur compounds) and heading No. 29.31 (other organo-inorganic compounds) do not include sulphonated or halogenated derivatives (including compound derivatives) which, apart from hydrogen, oxygen and nitrogen, only have directly linked to carbon the atoms of sulphur or of a halogen which give them their nature of sulphonated or halogenated derivatives (or compound derivatives).
7. Headings Nos. 29.32, 29.33 and 29.34 do not include epoxides with a three-membered ring, ketone peroxides, cyclic polymers of aldehydes or of thioaldehydes, anhydrides of polybasic carboxylic acids, cyclic esters of polyhydric alcohols or phenols with polybasic acids, or imides of polybasic acids.

These provisions apply only when the ring-position hetero-atoms are those resulting solely from the cyclising function or functions here listed.

Subheading Note.

1. Within any one heading of this Chapter, derivatives of a chemical compound (or group of chemical compounds) are to be classified in the same subheading as that compound (or group of compounds) provided that they are not more specifically covered by any other subheading and that there is no residual subheading named "Other" in the series of subheadings concerned.

Section VII

PLASTICS AND ARTICLES THEREOF;
RUBBER AND ARTICLES THEREOF

Notes.

1. Goods put up in sets consisting of two or more separate constituents, some or all of which fall in this Section and are intended to be mixed together to obtain a product of Section VI or VII, are to be classified in the heading appropriate to that product, provided that the constituents are:
 - a) having regard to the manner in which they are put up, clearly identifiable as being intended to be used together without first being repacked;
 - b) presented together; and
 - c) identifiable, whether by their nature or by the relative proportions in which they are present, as being complementary one to another.
 2. Except for the goods of heading No. 39.18 or 39.19, plastics, rubber, and articles thereof, printed with motifs, characters or pictorial representations, which are not merely incidental to the primary use of the goods, fall in Chapter 49.

Chapter 39

PLASTICS AND ARTICLES THEREOF

Notes.

1. Throughout the Classification the expression "plastics" means those materials of headings Nos. 39.01 to 39.14 which are or have been capable, either at the moment of polymerisation or at some subsequent stage, of being formed under external influence (usually heat and pressure, if necessary with a solvent or plasticiser) by moulding, casting, extruding, rolling or other process into shapes which are retained on the removal of the external influence.

Throughout the Classification any reference to "plastics" also includes vulcanised fibre. The expression, however, does not apply to materials regarded as textile materials of Section XI.

2. This Chapter does not cover:

- a) Waxes of heading No. 27.12 or 34.04;
 - b) Separate chemically defined organic compounds (Chapter 29);
 - c) Heparin or its salts (heading No. 30.01);

3. Headings Nos. 39.01 to 39.11 apply only to goods of a kind produced by chemical synthesis, falling in the following categories:
- a) Liquid synthetic polyolefins of which less than 60% by volume distils at 300 °C, after conversion to 1,013 millibars when a reduced-pressure distillation method is used (headings Nos. 39.01 and 39.02);
 - b) Resins, not highly polymerised, of the coumarone-indene type (heading No. 39.11);
 - c) Other synthetic polymers with an average of at least 5 monomer units;
 - d) Silicones (heading No. 39.10);
 - e) Resols (heading No. 39.09) and other prepolymers.

4. For the purposes of this Chapter, except where the context otherwise requires, copolymers (including co-polycondensates, co-polyaddition products, block copolymers and graft copolymers) and polymer blends are to be classified in the heading covering polymers of that comonomer which predominates by weight over every other single comonomer, comonomers whose polymers fall in the same heading being regarded as constituting a single comonomer.

If no single comonomer predominates, copolymers or polymer blends, as the case may be, are to be classified in the heading which occurs last in numerical order among those which equally merit consideration.

The expression "copolymers" covers all polymers in which no single monomer contributes 95% or more by weight to the total polymer content.

5. Chemically modified polymers, that is those in which only appendages to the main polymer chain have been changed by chemical reaction, are to be classified in the heading appropriate to the unmodified polymer. This provision does not apply to graft copolymers.
6. In headings Nos. 39.01 to 39.14, the expression "primary forms" applies only to the following forms:
 - a) Liquids and pastes, including dispersions (emulsions and suspensions) and solutions;
 - b) Blocks of irregular shape, lumps, powders (including moulding powders), granules, flakes and similar bulk forms.
7. Heading No. 39.15 does not apply to waste, parings and scrap of a single thermoplastic material, transformed into primary forms (headings Nos. 39.01 to 39.14).
8. For the purposes of heading No. 39.17, the expression "tubes, pipes and hoses" means hollow products, whether semi-manufactures or finished products, of a kind generally used for conveying, conducting or distributing gases or liquids (for example, ribbed garden hose, perforated tubes). This expression also includes sausage casings and other lay-flat tubing. However, except for the last-mentioned, those having an internal cross-section other than round, oval, rectangular (in which the length does not exceed 1.5 times the width) or in the shape of a regular polygon are not to be regarded as tubes, pipes and hoses but as profile shapes.
9. For the purposes of heading No. 39.18, the expression "wall or ceiling coverings of plastics" applies to products in rolls, of a width not less than 45 cm, suitable for wall or ceiling decoration, consisting of plastics fixed permanently on a backing of any material other than paper, the layer of plastics (on the face side) being grained, embossed, coloured, design-printed or otherwise decorated.
10. In headings Nos. 39.20 and 39.21, the expression "plates, sheets, film, foil and strip" applies only to plates, sheets, film, foil and strip (other than those of Chapter 54) and to blocks of regular geometric shape, whether or not printed or otherwise surface-worked, uncut or cut into rectangles (including squares) but not further worked (even if when so cut they become articles ready for use).
11. Heading No. 39.25 applies only to the following articles, not being products covered by any of the earlier headings of sub-Chapter II:
 - a) Reservoirs, tanks (including septic tanks), vats and similar containers, of a capacity exceeding 300 l;
 - b) Structural elements used, for example, in floors, walls or partitions, ceilings or roofs;
 - c) Gutters and fittings therefor;
 - d) Doors, windows and their frames and thresholds for doors;
 - e) Balconies, balustrades, fencing, gates and similar barriers;
 - f) Shutters, blinds (including Venetian blinds) and similar articles and parts and fittings thereof;
 - g) Large-scale shelving for assembly and permanent installation, for example, in shops, workshops, warehouses;
 - h) Ornamental architectural features, for example, flutings, cupolas, dovescotes; and
 - ij) Fittings and mountings intended for permanent installation in or on doors, windows, staircases, walls or other parts of buildings, for example, knobs, handles, hooks, brackets, towel rails, switch-plates and other protective plates.

Subheading Note.

1. Within any one heading of this Chapter, copolymers (including co-polycondensates, co-polyaddition products, block copolymers and graft copolymers) are to be classified in the same subheading as homopolymers of the predominant comonomer and chemically modified polymers of the kind specified in Chapter Note 5 are to be classified in the same subheading as the unmodified polymer, provided that such copolymers or chemically modified polymers are not more specifically covered by any other subheading and that there is no residual subheading named "Other" in the series of subheadings concerned. Polymer blends are to be classified in the same subheading as copolymers (or homopolymers, as the case may be) of the same monomers in the same proportions.

Chapter 40

RUBBER AND ARTICLES THEREOF

Notes.

1. Except where the context otherwise requires, throughout the Classification the expression "rubber" means the following products, whether or not vulcanised or hard: natural rubber, balata, gutta-percha, guayule, chicle and similar natural gums, synthetic rubber, factice derived from oils, and such substances reclaimed.
2. This Chapter does not cover:
 - a) Goods of Section XI (textiles and textile articles);
 - b) Footwear or parts thereof of Chapter 64;
 - c) Headgear or parts thereof (including bathing caps) of Chapter 65;
 - d) Mechanical or electrical appliances or parts thereof of Section XVI (including electrical goods of all kinds), of hard rubber;
 - e) Articles of Chapter 90, 92, 94, or 96; or
 - f) Articles of Chapter 95 (other than sports gloves and articles of headings Nos. 40.11 to 40.13).
3. In headings Nos. 40.01 to 40.03 and 40.05, the expression "primary forms" applies only to the following forms:
 - a) Liquids and pastes (including latex, whether or not pre-vulcanised, and other dispersions and solutions);
 - b) Blocks of irregular shape, lumps, bales, powders, granules, crumbs and similar bulk forms.
4. In Note 1 to this Chapter and in heading No. 40.02, the expression "synthetic rubber" applies to:
 - a) Unsaturated synthetic substances which can be irreversibly transformed by vulcanisation with sulphur into non-thermoplastic substances which, at a temperature between 18 °C and 29 °C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length. For the purposes of this test, substances necessary for the cross-linking, such as vulcanising activators or accelerators, may be added; the presence of substances as provided for by Note 5 (b) (ii) and (iii) is also permitted. However, the presence of any substances not necessary for the cross-linking, such as extenders, plasticisers and fillers, is not permitted;
 - b) Thioplasts (TM); and
 - c) Natural rubber modified by grafting or mixing with plastics, depolymerised natural rubber, mixtures of unsaturated synthetic substances with saturated synthetic high polymers provided that all the above-mentioned products comply with the requirements concerning vulcanisation, elongation and recovery in (a) above.
5. a) Headings Nos. 40.01 and 40.02 do not apply to any rubber or mixture of rubbers which has been compounded, before or after coagulation, with:
 - i) vulcanising agents, accelerators, retarders or activators (other than those added for the preparation of pre-vulcanised rubber latex);
 - ii) pigments or other colouring matter, other than those added solely for the purpose of identification;
 - iii) Plasticisers or extenders (except mineral oil in the case of oil-extended rubber), fillers, reinforcing agents, organic solvents or any other substances, except those permitted under (b);
- b) The presence of the following substances in any rubber or mixture of rubbers shall not affect its classification in heading No. 40.01 or 40.02, as the case may be, provided that such rubber or mixture of rubbers retains its essential character as raw material:
 - i) emulsifiers or anti-tack agents;
 - ii) small amounts of breakdown products of emulsifiers
 - iii) very small amounts of the following: heat-sensitive agents (generally for obtaining thermosensitive rubber latexes), cationic surface-active agents (generally for obtaining electro-positive rubber latexes), antioxidants, coagulants, crumbling agents, freeze-resisting agents, peptisers, preservatives, stabilisers, viscosity-control agents, or similar special-purpose additives.
6. For the purposes of heading No. 40.04, the expression "waste, parings and scrap" means rubber waste, parings and scrap from the manufacture or working of rubber and rubber goods definitely not usable as such because of cutting-up, wear or other

reasons.

7. Thread wholly of vulcanised rubber, of which any cross-sectional dimension exceeds 5 mm, is to be classified as strip, rods or profile shapes, of heading No. 40.08.
8. Heading No. 40.10 includes conveyor or transmission belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated, coated, covered or sheathed with rubber.
9. In headings Nos. 40.01, 40.02, 40.03, 40.05 and 40.08, the expressions "plates", "sheets" and "strip" apply only to plates, sheets and strip and to blocks of regular geometric shape, uncut or simply cut to rectangular (including square) shape, whether or not having the character of articles and whether or not printed or otherwise surface-worked, but not otherwise cut to shape or further worked.

In heading No. 40.08 the expressions "rods" and "profile shapes" apply only to such products, whether or not cut to length or surface-worked but not otherwise worked.

Except where heading No. 48.03 otherwise requires, these headings do not apply to paper, paperboard, cellulose wadding or webs of cellulose fibres which have been otherwise processed, for example, by coating or impregnation.
3. In this Chapter the expression "newsprint" means uncoated paper of a kind used for the printing of newspapers, of which not less than 65% by weight of the total fibre content consists of wood fibres obtained by a mechanical process, unsized or very lightly sized, having a smoothness on each side not exceeding 200 seconds Bekk, weighing not less than 40 g/m² and not more than 57 g/m² and having an ash content by weight not exceeding 8%.
4. In addition to hand-made paper and paperboard, heading No. 48.02 covers only paper and paperboard made mainly from bleached pulp or from pulp obtained by a mechanical process and satisfying any of the following criteria:

For paper or paperboard weighing not more than 150 g/m²:

 1. weighing not more than 80 g/m², or
 2. coloured throughout the mass; or
- b) containing over 8% ash, and
 1. weighing not more than 80 g/m², or
 2. coloured throughout the mass; or
- c) containing over 3% ash and having a brightness of 60% or more (*); or
- d) containing more than 3% but not more than 8% ash, having a brightness under 60% (*), and a burst index equal to or less

than 2.5 kPa/g/m²; or

- e) containing 3% ash or less, having a brightness of 60% or more (*) and a burst index equal to or less than 2.5 kPa/g/m².

For paper or paperboard weighing more than 150 g/m²:

- a) coloured throughout the mass; or
- b) having a brightness of 60% or more (*), and
1. a caliper of 225 micrometres (microns) or less, or
 2. a caliper more than 225 micrometres (microns) but not more than 508 micrometres (microns) and ash content more than 3%
- c) having a brightness of less than 60% (*), a caliper of 254 micrometres (microns) or less and an ash content more than 8%.

Heading No. 48.02 does not, however, cover filter paper or paperboard (including tea-bag paper) or felt paper and paperboard.

5. In this Chapter "kraft paper and paperboard" means paper and paperboard of which not less than 80% by weight of the total fibre content consists of fibres obtained by the chemical sulphate or soda processes.
6. Paper, paperboard, cellulose wadding and webs of cellulose fibres answering to a description in two or more of the headings Nos. 48.01 to 48.11 are to be classified under that one of such headings which occurs last in numerical order in the Classification.
7. Headings Nos. 48.01, 48.02, 48.04 to 48.08, 48.10 and 48.11 apply only to paper, paperboard, cellulose wadding and webs of cellulose fibres:
- a) in strips or rolls of a width exceeding 15 cm; or
 - b) in rectangular (including square) sheets with one side exceeding 36 cm and the other side exceeding 15 cm in unfolded state.

Except that hand-made paper and paperboard in any size or shape as made directly and having all its edges deckled remains classified, subject to the provisions of Note 6, in heading No. 48.02.

8. For the purposes of heading No. 48.14, the expression "wallpaper and similar wall coverings" applies only to:

Subheading Notes.

1. For the purposes of subheadings Nos. 4804.11 and 4804.19, "kraftliner" means machine-finished or machine-glazed paper and paperboard, of which not less than 80% weight of the total fibre content consists of wood fibres obtained by the chemical

sulphate or soda processes, in rolls, weighing more than 115 g/m² and having a minimum Mullen bursting strength as indicated in the following table or the linearly interpolated or extrapolated equivalent for any other weight.

Weight g/m ²	Minimum Mullen bursting strength kPa
115	393
125	417
200	637
300	824
400	961

2. For the purposes of subheadings Nos. 4804.21 and 4804.29, "sack kraft paper" means machine-finished paper, of which not less than 80% by weight of the total fibre content consists of fibres obtained by the chemical sulphate or soda processes, in rolls, weighing not less than 60 g/m² but not more than 115 g/m² and meeting one of the following sets of specifications:

- a) Having a Mullen burst index of not less than 38 and a stretch factor of more than 4.5% in the cross direction and of more than 2% in the machine direction.
- b) Having minima for tear and tensile as indicated in the following table or the linearly interpolated equivalent for any other weight:

Weight g/m ²	Minimum tear mN		Minimum tensile kN/m	
	Machine direction	Machine direction plus cross direction	Cross direction	Machine direction plus cross direction
60	700	1.510	1.9	6
70	830	1.790	2.3	7.2
80	965	2.070	2.8	8.3
100	1,230	2.635	3.7	10.6
115	1,425	3.060	4.4	12.3

3. For the purposes of subheading 4805.10, "semi-chemical fluting paper" means paper, in rolls, of which not less than 65% by weight of the total fibre content consists of unbleached hardwood fibres obtained by a semi-chemical pulping process, and having a CMT 60 (Concora Medium Test with 60 minutes of conditioning) crush resistance exceeding 20 kgf at 50% relative humidity, at 23 °C.
4. For the purposes of subheading No. 4805.30, "sulphite wrapping paper" means machine-glazed paper, of which more than 40% by weight of the total fibre content consists of wood fibres obtained by the chemical sulphite process, having an ash content not exceeding 8% and having a Mullen index ratio of not less than 15.
5. For the purposes of subheading No. 4810.21, "light-weight coated paper" means paper, coated on both sides, of a total weight not exceeding 72 g/m², with a coating weight not exceeding 15 g/m² per side, on a base of which not less than 50% by weight of the total fibre content consists of wood fibres obtained by a mechanical process.

 - ii) Put up on supports or in some other manner indicating its use in the textile industry (for example, on cops, twisting mill tubes, pirns, conical bobbins or spindles, or reeled in the form of cocoons for embroidery looms).
5. For the purposes of headings Nos. 52.04, 54.01 and 55.08 the expression "sewing thread" means multiple (folded) or cabled yarn:
- a) Put up on supports (for example, reels, tubes) of a weight (including support) not exceeding 1,000 g;
 - b) Dressed; and
 - c) With a final "Z" twist.
6. For the purposes of this Section, the expression "high tenacity yarn" means yarn having a tenacity, expressed in cN/tex (centinewtons per tex), greater than the following:
- | | |
|--|------------|
| Single yarn of nylon or other polyamides, or of polyesters..... | 60 cN/tex |
| Multiple (folded) or cabled yarn of nylon or other polyamides, or of polyesters..... | 53 cN/tex |

7. For the purposes of this Section, the expression "made up" means:
- a) Cut otherwise than into squares or rectangles;
 - b) Produced in the finished state, ready for use (or merely needing separation by cutting dividing threads) without sewing or other working (for example, certain dusters, towels, table cloths, scarf squares, blankets);
 - c) Hemmed or with rolled edges, or with a knotted fringe at any of the edges, but excluding fabrics the cut edges of which have been prevented from unravelling by whipping or by other simple means;
 - d) Cut to size and having undergone a process of drawn thread work;
 - e) Assembled by sewing, gumming or otherwise (other than piece goods consisting of two or more lengths of identical material joined end to end and piece goods composed of two or more textiles assembled in layers, whether or not padded);
 - f) Knitted or crocheted to shape, presented in the form of a number of items in the length.
8. Chapters 50 to 55 and, except where the context otherwise requires, Chapters 56 to 60, do not apply to goods made up within the meaning of Note 7 above. Chapters 50 to 55 do not apply to goods of Chapters 56 to 59.
9. The woven fabrics of Chapters 50 to 55 include fabrics consisting of layers of parallel textile yarns superimposed on each other at acute or right angles. These layers are bonded at the intersections of the yarns by an adhesive or by thermal bonding.
10. Elastic products consisting of textile materials combined with rubber threads are classified in this Section.
11. For the purposes of this Section, the expression "impregnated" includes "dipped".
12. For the purposes of this Section, the expression "polyamides" includes "aramids".
13. Unless the context otherwise requires, textile garments of different headings are to be classified in their own headings even if put up in sets for retail sale.

Subheading Notes.

1. In this Section and, where applicable, throughout the Classification, the following expressions have the meanings hereby assigned to them:
- a) **Elastomeric yarn**

Filament yarn, including monofilament, of synthetic textile material, other than textured yarn, which does not break on being extended to three times its original length and which returns, after being extended to twice its original

length, within a period of five minutes, to a length not greater than one and a half times its original length.

b) **Unbleached yarn**

Yarn which:

- i) has the natural colour of its constituent fibres and has not been bleached, dyed (whether or not in the mass) or printed; or
- ii) is of indeterminate colour ("grey yarn"), manufactured from garnetted stock.

Such yarn may have been treated with a colourless dressing or fugitive dye (which disappears after simple washing with soap) and, in the case of man-made fibres, treated in the mass with delustring agents (for example, titanium dioxide).

c) **Bleached yarn**

Yarn which:

- i) has undergone a bleaching process, is made of bleached fibres or, unless the context otherwise requires, has been dyed white (whether or not in the mass) or treated with a white dressing;
- ii) consists of a mixture of unbleached and bleached fibres; or
- iii) is multiple (folded) or cabled and consists of unbleached and bleached yarns.

d) **Coloured (dyed or printed) yarn**

Yarn which:

- i) is dyed (whether or not in the mass) other than white or in a fugitive colour or printed, or made from dyed or printed fibres;
- ii) consists of a mixture of dyed fibres of different colours or of a mixture of unbleached or bleached fibres with coloured fibres (marl or mixture yarns), or is printed in one or more colours at intervals to give the impression of dots;
- iii) is obtained from slivers or rovings which have been printed; or
- iv) is multiple (folded) or cabled and consists of unbleached or bleached yarn and coloured yarn.

The above definitions also apply, *mutatis mutandis*, to monofilament and to strip or the like of Chapter 54.

e) **Unbleached woven fabric**

Woven fabric made from unbleached yarn and which has not been bleached, dyed or printed. Such fabric may have been treated with a colourless dressing or a fugitive dye.

f) **Bleached woven fabric**

Woven fabric which:

- i) has been bleached or, unless the context otherwise requires, dyed white or treated with a white dressing, in the piece;
- ii) consists of bleached yarn; or
- iii) consists of unbleached and bleached yarn.

g) **Dyed woven fabric**

Woven fabric which:

- i) is dyed a single uniform colour other than white (unless the context otherwise requires) or has been treated with a coloured finish other than white (unless the context otherwise requires), in the piece; or
- ii) consists of coloured yarn of a single uniform colour.

h) **Woven fabrics of yarns of different colours**

Woven fabric (other than printed woven fabric) which:

- i) consists of yarns of different colours or yarns of different shades of the same colour (other than the natural colour of the constituent fibres);

ii) consists of unbleached or bleached yarn and coloured yarn; or

iii) consists of marl or mixture yarns.

(In all cases, the yarn used in selvages and piece ends is not taken into consideration.)

ij) Printed woven fabric

Woven fabric which has been printed in the piece, whether or not made from yarns of different colours.

(The following are also regarded as printed woven fabrics: woven fabrics bearing designs made, for example, with a brush or spray gun, by means of transfer paper, by flocking or by the batik process.)

The process of mercerisation does not affect the classification of yarns or fabrics within the above categories.

k) Plain weave

A fabric construction in which each yarn of the weft passes alternately over and under successive yarns of the warp and each yarn of the warp passes alternately over and under successive yarns of the weft.

2. (A) Products of Chapters 56 to 63 containing two or more textile materials are to be regarded as consisting wholly of that textile material which would be selected under Note 2 to this Section for the classification of a product of Chapters 50 to 55 consisting of the same textile materials.

(B) For the application of this rule:

- a) where appropriate, only the part which determines the classification under Interpretative Rule 3 shall be taken into account;
 - b) in the case of textile products consisting of a ground fabric and a pile or looped surface no account shall be taken of the ground fabric;
 - c) in the case of embroidery of heading No. 58.10 only the ground fabric shall be taken into account. However, embroidery without visible ground shall be classified with reference to the embroidering threads alone.

Chapter 54

MAN-MADE FILAMENTS

Notes.

1. Throughout the Classification, the term "man-made fibres" means staple fibres and filaments of organic polymers produced by manufacturing processes, either:

- a) By polymerisation of organic monomers, such as polyamides, polyesters, polyurethanes or polyvinyl derivatives; or
- b) By chemical transformation of natural organic polymers (for example, cellulose, casein, proteins or algae), such as viscose rayon, cellulose acetate, cupro or alginates.

The terms "synthetic" and "artificial", used in relation to fibres, mean: synthetic: fibres as defined at (a); artificial: fibres as defined at (b).

The terms "man-made", "synthetic" and "artificial" shall have the same meanings when used in relation to "textile materials".

2. Headings Nos. 54.02 and 54.03 do not apply to synthetic or artificial filament tow of Chapter 55.

MAN-MADE STAPLE FIBRES

Note.

1. Headings Nos. 55.01 and 55.02 apply only to man-made filament tow, consisting of parallel filaments of a uniform length equal to the length of the tow, meeting the following specifications:
- a) Length of tow exceeding 2 m;
 - b) Twist less than 5 turns per metre;
 - c) Measuring per filament less than 67 decitex;
 - d) Synthetic filament tow only: the tow must be drawn, that is to say, be incapable of being stretched by more than 100% of its length;
 - e) Total measurement of tow more than 20,000 decitex.

Tow of a length not exceeding 2 m is to be classified in heading No. 55.03 or 55.04.

Chapter 56

**WADDING, FELT AND NONWOVENS; SPECIAL YARNS;
TWINE, CORDAGE, ROPES AND CABLES
AND ARTICLES THEREOF**

Notes.

1. This Chapter does not cover:

- a) Wadding, felt or nonwovens, impregnated, coated or covered with substances or preparations (for example, perfumes or cosmetics of Chapter 33, soaps or detergents of heading No. 34.01, polishes, creams or similar preparations of heading No. 34.05, fabric softeners of heading No. 38.09) where the textile material is present merely as a carrying medium;
- b) Textile products of heading No. 58.11;
- c) Natural or artificial abrasive powder or grain, on a backing of felt or nonwovens (heading No. 68.05);
- d) Agglomerated or reconstituted mica, on a backing of felt or nonwovens (heading No. 68.14); or
- e) Metal foil on a backing of felt or nonwovens (Section XV).

2. The term "felt" includes needleloom felt and fabrics consisting of a web of textile fibres the cohesion of which has been enhanced by a stitch-bonding process using fibres from the web itself.

3. Headings Nos. 56.02 and 56.03 cover respectively felt and nonwovens, impregnated, coated, covered or laminated with plastics or rubber whatever the nature of these materials (compact or cellular).

Heading No. 56.03 also includes nonwovens in which plastics or rubber forms the bonding substance.

Headings Nos. 56.02 and 56.03 do not, however, cover:

- a) Felt impregnated, coated, covered or laminated with plastics or rubber, containing 50% or less by weight of textile material or felt completely embedded in plastics or rubber (Chapter 39 or 40);
 - b) Nonwovens, either completely embedded in plastics or rubber, or entirely coated or covered on both sides with such materials, provided that such coating or covering can be seen with the naked eye with no account being taken of any resulting change of colour (Chapter 39 or 40); or
 - c) Plates, sheets or strip of cellular plastics or cellular rubber combined with felt or nonwovens, where the textile material is present merely for reinforcing purposes (Chapter 39 or 40).
4. Heading No. 56.04 does not cover textile yarn, or strip or the like of heading No. 54.04 or 54.05, in which the impregnation, coating or covering cannot be seen with the naked eye (usually Chapters 50 to 55); for the purpose of this provision, no account should be taken of any resulting change of colour.

Chapter 61

ARTICLES OF APPAREL AND CLOTHING ACCESSORIES,
KNITTED OR CROCHETED

Notes.

1. This Chapter applies only to made up knitted or crocheted articles.
2. This Chapter does not cover:
 - a) Goods of heading No. 62.12;
 - b) Worn clothing or other worn articles of heading No. 63.09; or
 - c) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.21).
3. For the purposes of headings Nos. 61.03 and 61.04:

- a) The term "suit" means a set of garments composed of two or three pieces made up in identical fabric and comprising:

- one garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs, and
- one suit coat or jacket the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition.

All of the components of a suit must be of the same fabric construction, style, colour and composition; they must also be of corresponding or compatible size. If several separate components to cover the lower part of the body are presented together (for example, trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be the trousers, or, in the case of women's or girls' suits, the skirt or divided skirt, the other garments being considered separately.

The term "suit" includes the following sets of garments, whether or not they fulfil all the above conditions:

- morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;
 - evening dress (tailcoat), generally made of black fabric, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;
 - dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.
- b) The term "ensemble" means a set of garments (other than suits and articles of heading No. 61.07, 61.08 or 61.09), composed of several pieces made up in identical fabric, put up for retail sale, and comprising:
 - one garment designed to cover the upper part of the body, with the exception of pullovers which may form a second upper garment in the sole context of twin sets, and of waistcoats which may also form a second upper garment, and
 - one or two different garments, designed to cover the lower part of the body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt.

All of the components of an ensemble must be of the same fabric construction, style, colour and composition; they also must be of corresponding or compatible size. The term "ensemble" does not apply to track suits or ski suits, of heading No. 61.12.

4. Headings Nos. 61.05 and 61.06 do not cover garments with pockets below the waist, with a ribbed waistband or other means of tightening at the bottom of the garment, or garments having an average of less than 10 stitches per linear centimetre in each direction counted on an area measuring at least 10 cm x 10 cm. Heading No. 61.05 does not cover sleeveless garments.
5. For the purposes of heading No. 61.11:
 - a) The expression "babies' garments and clothing accessories" means articles for young children of a body height not exceeding 86 cm; it also covers babies' napkins;
 - b) Articles which are, *prima facie*, classifiable both in heading No. 61.11 and in other headings of this Chapter are to be classified in heading No. 61.11.
6. For the purposes of heading No. 61.12, "ski suits" means garments or sets of garments which, by their general appearance and texture, are identifiable as intended to be worn principally for skiing (cross-country or alpine). They

consist either of:

- a) a "ski overall", that is, a one-piece garment designed to cover the upper and the lower parts of the body; in addition to sleeves and a collar the ski overall may have pockets or footstraps; or
- b) a "ski ensemble", that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
 - one garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
 - one pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.

The "ski ensemble" may also consist of an overall similar to the one mentioned in paragraph (a) above and a type of padded, sleeveless jacket worn over the overall.

All the components of a "ski ensemble" must be made up in a fabric of the same texture, style and composition whether or not of the same colour; they also must be of corresponding or compatible size.

7. Garments which are, *prima facie*, classifiable both in heading No. 61.13 and in other headings of this Chapter, excluding heading No. 61.11, are to be classified in heading No. 61.13.
8. Articles of this Chapter which cannot be identified as either men's or boys' garments or as women's or girls' garments are to be classified in the headings covering women's or girls' garments.
9. Articles of this Chapter may be made of metal thread.

Chapter 62

ARTICLES OF APPAREL AND CLOTHING ACCESSORIES,
NOT KNITTED OR CROCHETED

Notes.

1. This Chapter applies only to made up articles of any textile fabric other than wadding, excluding knitted or crocheted articles (other than those of heading No. 62.12.)
2. This Chapter does not cover:
 - a) Worn clothing or other worn articles of heading No. 63.09; or
 - b) Orthopaedic appliances, surgical belts, trusses or the like (heading No. 90.21).
3. For the purposes of headings Nos. 62.03 and 62.04:
 - a) The term "suit" means a set of garments composed of two or three pieces made up in identical fabric and comprising:

- one garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs, and
- one suit coat or jacket the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition.

All of the components of a suit must be of the same fabric construction, style, colour and composition; they must also be of corresponding or compatible size. If several separate components to cover the lower part of the body are presented together (for example, trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be the trousers, or, in the case of women's or girls' suits, the skirt or divided skirt, the other garments being considered separately.

The term "suit" includes the following sets of garments, whether or not they fulfil all the above conditions:

- morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;
 - evening dress (tailcoat), generally made of black cloth, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;
 - dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.
- b) The term "ensemble" means a set of garments (other than suits and articles of heading No. 62.07 or 62.08) composed of several pieces made up in identical fabric, put up for retail sale, and comprising:
 - one garment designed to cover the upper part of the body, with the exception of waistcoats which may also form a second upper garment, and
 - one or two different garments, designed to cover the lower part of the body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt.

All of the components of an ensemble must be of the same fabric construction, style, colour and composition; they also must be of corresponding or compatible size. The term "ensemble" does not apply to track suits or ski suits, of heading No. 62.11.

4. For the purposes of heading No. 62.09:
 - a) The expression "babies' garments and clothing accessories" means articles for young children of a body height not exceeding 86 cm; it also covers babies' napkins;
 - b) Articles which are, *prima facie*, classifiable both in heading No. 62.09 and in other headings of this Chapter are to be classified in heading No. 62.09.
5. Garments which are, *prima facie*, classifiable both in heading No. 62.10 and in other headings of this Chapter, excluding heading No. 62.09, are to be classified in heading No. 62.10.
6. For the purposes of heading No. 62.11, "ski suits" means garments or sets of garments which, by their general appearance and texture, are identifiable as intended to be worn principally for skiing (cross-country or alpine). They consist either of:
 - a) a "ski overall", that is, a one-piece garment designed to cover the upper and the lower parts of the body; in addition to sleeves and a collar the ski overall may have pockets or footstraps; or

- b) a "ski ensemble", that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
- one garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
 - one pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.

The "ski ensemble" may also consist of an overall similar to the one mentioned in paragraph (a) above and a type of padded, sleeveless jacket worn over the overall.

All the components of a "ski ensemble" must be made up in a fabric of the same texture, style and composition whether or not of the same colour; they also must be of corresponding or compatible size.

7. Scarves and articles of the scarf type, square or approximately square, of which no side exceeds 60 cm, are to be classified as handkerchiefs (heading No. 62.13). Handkerchiefs of which any side exceeds 60 cm are to be classified in heading No. 62.14.
8. Articles of this Chapter which cannot be identified as either men's or boys' garments or as women's or girls' garments are to be classified in the headings covering women's or girls' garments.
9. Articles of this Chapter may be made of metal thread.

 - b) Articles of Chapter 71 (for example, imitation jewellery);
 - c) Optical fibre cables of heading No. 85.44, electrical insulators (heading No. 85.46) or fittings of insulating material of heading No. 85.47;
 - d) Optical fibres, optically worked optical elements, hypodermic syringes, artificial eyes, thermometers, barometers, hydrometers or other articles of Chapter 90;
 - e) Lamps or lighting fittings, illuminated signs, illuminated name-plates or the like, having a permanently fixed light source, or parts thereof of heading No. 94.05;

2. For the purposes of headings Nos. 70.03, 70.04 and 70.05:
 - a) glass is not regarded as "worked" by reason of any process it has undergone before annealing;
 - b) cutting to shape does not affect the classification of glass in sheets;
 - c) the expression "absorbent or reflecting layer" means a microscopically thin coating of metal or of a chemical compound (for example, metal oxide) which absorbs, for example, infra-red light or improves the reflecting qualities of the glass while still allowing it to retain a degree of transparency or translucency.
3. The products referred to in heading No. 70.06 remain classified in that heading whether or not they have the character of articles.
4. For the purposes of heading No. 70.19, the expression "glass wool" means:
 - a) Mineral wools with a silica (SiO₂) content not less than 60% by weight;
 - b) Mineral wools with a silica (SiO₂) content less than 60% but with an alkaline oxide (K₂O or Na₂O) content exceeding 5% by weight or a boric oxide (B₂O₃) content exceeding 2% by weight.

For the purposes of this Chapter, any alloy (including a sintered mixture and an inter-metallic compound) containing precious metal is to be treated as an alloy of precious metal if any one precious metal constitutes as much as 2%, by weight, of the alloy. Alloys of precious metal are to be classified according to the following rules:
 - a) An alloy containing 2% or more, by weight, of platinum is to be treated as an alloy of platinum;
 - b) An alloy containing 2% or more, by weight, of gold but no platinum, or less than 2%, by weight, of platinum, is to

be treated as an alloy of gold;

- c) Other alloys containing 2% or more, by weight, of silver are to be treated as alloys of silver.
6. Except where the context otherwise requires, any reference in the Classification to precious metal or to any particular precious metal includes a reference to alloys treated as alloys of precious metal or of the particular metal in accordance with the rules in Note 5 above, but not to metal clad with precious metal or to base metal or non-metals plated with precious metal.
 7. Throughout the Classification the expression "metal clad with precious metal" means material made with a base of metal upon one or more surfaces of which there is affixed by soldering, brazing, welding, hot-rolling or similar mechanical means a covering of precious metal. Except where the context otherwise requires, the expression also covers base metal inlaid with precious metal.
 8. For the purposes of heading No. 71.13, the expression "articles of jewellery" means:
 - a) Any small objects of personal adornment (gem-set or not) (for example, rings, bracelets, necklaces, brooches, earrings, watch-chains, fobs, pendants, tie-pins, cuff-links, dress-studs, religious or other medals and insignia); and
 - b) Articles of personal use of a kind normally carried in the pocket, in the handbag or on the person (such as cigarette cases, powder boxes, chain purses, cachou boxes).
 9. For the purposes of heading No. 71.14, the expression "articles of goldsmiths' or silversmiths' wares" includes such articles as ornaments, tableware, toilet-ware, smokers' requisites and other articles of household, office or religious use.
 10. For the purposes of heading No. 71.17, the expression "imitation jewellery" means articles of jewellery within the meaning of paragraph (a) of Note 8 above (but not including buttons or other articles of heading No. 96.06, or dress-combs, hair-slides or the like, or hairpins, of heading No. 96.15), not incorporating natural or cultured pearls, precious or semi-precious stones (natural, synthetic or reconstructed) nor (except as plating or as minor constituents) precious metal or metal clad with precious metal.

(*) The italic portion of this Note constitutes an optional text.

Subheading Notes.

1. For the purposes of subheadings Nos. 7106.10, 7108.11, 7110.11, 7110.21, 7110.31 and 7110.41, the expressions "powder" and "in powder form" mean products of which 90% or more by weight passes through a sieve having a mesh aperture of 0.5 mm.
2. Notwithstanding the provisions of Chapter Note 4 (b), for the purposes of subheadings Nos. 7110.11 and 7110.19, the expression "platinum" does not include iridium, osmium, palladium, rhodium or ruthenium.
3. For the classification of alloys in the subheadings of heading No. 71.10, each alloy is to be classified with that metal, platinum, palladium, rhodium, iridium, osmium or ruthenium which predominates by weight over each other of these metals.

3. Classification of alloys (other than ferro-alloys and master alloys as defined in Chapters 72 and 74):

- a) An alloy of base metals is to be classified as an alloy of the metal which predominates by weight over each of the other metals;
- b) An alloy composed of base metals of this Section and of elements not falling within this Section is to be treated as an alloy of base metals of this Section if the total weight of such metals equals or exceeds the total weight of the other elements present;
- c) In this Section the term "alloys" includes sintered mixtures of metal powders, heterogeneous intimate mixtures obtained by melting (other than cermets) and intermetallic compounds.

4. Unless the context otherwise requires, any reference in the Classification to a base metal includes a reference to alloys which, by virtue of Note 3 above, are to be classified as alloys of that metal.

5. Classification of composite articles:

Except where the headings otherwise require, articles of base metal (including articles of mixed materials treated as articles of base metal under the Interpretative Rules) containing two or more base metals are to be treated as articles of the base metal predominating by weight over each of the other metals.

For this purpose:

- a) Iron and steel, or different kinds of iron or steel, are regarded as one and the same metal;
 - b) An alloy is regarded as being entirely composed of that metal as an alloy of which, by virtue of Note 3, it is classified; and
 - c) A cermet of heading No. 81.13 is regarded as a single base metal.
6. In this Section, the following expressions have the meanings hereby assigned to them:

a) **Waste and scrap**

Metal waste and scrap from the manufacture or mechanical working of metals, and metal goods definitely not usable as such because of breakage, cutting-up, wear or other reasons.

b) **Powders**

These products are not presented in coils.

k) **Flat-rolled products**

Rolled products of solid rectangular (other than square) cross-section, which do not conform to the definition at (ij) above in the form of:

- coils of successively superimposed layers, or
- straight lengths, which if of a thickness less than 4.75 mm are of a width measuring at least ten times the thickness or if of a thickness of 4.75 mm or more are of a width which exceeds 150 mm and measures at least twice the thickness.

Flat-rolled products include those with patterns in relief derived directly from rolling (for example, grooves, ribs, chequers, tears, buttons, lozenges) and those which have been perforated, corrugated or polished, provided that they do not thereby assume the character of articles or products of other headings.

Flat-rolled products of a shape other than rectangular or square, of any size, are to be classified as products of a width of 600 mm or more, provided that they do not assume the character of articles or products of other headings.

l) **Bars and rods, hot-rolled, in irregularly wound coils**

Hot-rolled products in irregularly wound coils, which have a solid cross-section in the shape of circles, segments of circles, ovals, rectangles (including squares), triangles or other convex polygons. These products may have indentations, ribs, grooves or other deformations produced during the rolling process (reinforcing bars and rods).

m) **Other bars and rods**

Products which do not conform to any of the definitions at (ij), (k) or (l) above or to the definition of wire, which have a uniform solid cross-section along their whole length in the shape of circles, segments of circles, ovals, rectangles (including squares), triangles or other convex polygons. These products may:

- have indentations, ribs, grooves or other deformations produced during the rolling process (reinforcing bars and rods);
- be twisted after rolling.

n) Angles, shapes and sections

Products having a uniform solid cross-section along their whole length which do not conform to any of the definitions at (ij), (k), (l) or (m) above or to the definition of wire.

Hollow bars and rods of iron or steel not conforming to this definition are to be classified in heading No. 73.04.

2. Ferrous metals clad with another ferrous metal are to be classified as products of the ferrous metal predominating by weight.
3. Iron or steel products obtained by electrolytic deposition, by pressure casting or by sintering are to be classified, according to their form, their composition and their appearance, in the headings of this Chapter appropriate to similar hot-rolled products.

Subheading Notes.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) Alloy pig iron

d) High speed steel

Alloy steels containing, with or without other elements, at least two of the three elements molybdenum, tungsten and vanadium with a combined content by weight of 7% or more, 0.6% or more of carbon and 3 to 6% of chromium.

e) Silico-manganese steel

Alloy steels containing by weight:

- 0.35% or more but not more than 0.07% of carbon,

- 0.5% of more but not more than 1.2% of manganese, and
- 0.6% or more but not more than 2.3% of silicon, but not containing any other element in a proportion that would give the steel the characteristics of another alloy steel.

2. For the classification of ferro-alloys in the subheadings of heading No. 72.02 the following rule should be observed:

A ferro-alloy is considered as binary and classified under the relevant subheading (if it exists) if only one of the alloy elements exceeds the minimum percentage laid down in Chapter Note 1 (c); by analogy, it is considered respectively as ternary or quaternary if two or three alloy elements exceed the minimum percentage.

For the application of this rule the unspecified "other elements" referred to in Chapter Note 1 (c) must each exceed 10% by weight.

Chapter 73

ARTICLES OF IRON OR STEEL

Notes.

1. In this Chapter the expression "cast iron" applies to products obtained by casting in which iron predominates by weight over each of the other elements and which do not comply with the chemical composition of steel as defined in Note 1 (d) to Chapter 72.
2. In this Chapter the word "wire" means hot or cold-formed products of any cross-sectional shape, of which no cross-sectional dimension exceeds 16 mm.

Chapter 74

COPPER AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Refined copper**

Metal containing at least 99.85% by weight of copper; or

Metal containing at least 97.5% by weight of copper, provided that the content by weight of any other element does not exceed the limit specified in the following table:

TABLE - Other elements

Element		Limiting content % by weight
Ag	Silver	0.25
As	Arsenic	0.5
Cd	Cadmium	1.3
Cr	Chromium	1.4
Mg	Magnesium	0.8
Pb	Lead	1.5
S	Sulphur	0.7
Sn	Tin	0.8
Te	Tellurium	0.8
Zn	Zinc	1
Zr	Zirconium	0.3
Other elements *, each		0.3

* Other elements are, for example, Al, Be, Co, Fe, Mn, Ni, Si.

b) **Copper alloys**

Metallic substances other than unrefined copper in which copper predominates by weight over each of the other elements, provided that:

- the content by weight of at least one of the other elements is greater than the limit specified in the foregoing table; or
- the total content by weight of such other elements exceeds 2.5%.

c) **Master alloys**

Alloys containing with other elements more than 10% by weight of copper, not usefully malleable and commonly used as an additive in the manufacture of other alloys or as de-oxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals. However, copper phosphide (phosphor copper) containing more than 15% by weight of phosphorus falls in heading No. 28.48.

d) **Bars and rods**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

Wire-bars and billets with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, drawing stock (wire-rod) or tubes, are however to be taken to be unwrought copper of heading No. 74.03.

e) **Profiles**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes.

The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

f) Wire

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

In the case of heading No. 74.14, however, the term "wire" applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

g) Plates, sheets, strip and foil

Flat-surfaced products (other than the unwrought products of heading No. 74.03), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles of products of other headings.

Headings Nos. 74.09 and 74.10 apply, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

h) Tubes and pipes

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be taken to be tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) Copper-zinc base alloys (brasses)

Alloys of copper and zinc, with or without other elements. When other elements are present:

- zinc predominates by weight over each of such other elements;
- any nickel content by weight is less than 5% (see copper-nickel-zinc alloys (nickel silvers)); and
- any tin content by weight is less than 3% (see copper-tin alloys (bronzes)).

b) Copper-tin base alloys (bronzes)

Alloys of copper and tin, with or without other elements. When other elements are present, tin predominates by weight over each of such other elements, except that when the tin content is 3% or more the zinc content by weight may exceed that of tin but must be less than 10%.

c) Copper-nickel-zinc base alloys (nickel silvers)

Alloys of copper, nickel and zinc, with or without other elements. The nickel content is 5% or more by weight (see copper-zinc alloys (brasses)).

d) Copper-nickel base alloys

Alloys of copper and nickel, with or without other elements but in any case containing by weight not more than 1% of zinc. When other elements are present, nickel predominates by weight over each of such other elements.

Chapter 75

NICKEL AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Bars and rods**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

b) **Profiles**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

c) **Wire**

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

d) **Plates, sheets, strip and foil**

Flat-surfaced products (other than the unwrought products of heading No. 75.02), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Heading No. 75.06 applies, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

e) **Tubes and pipes**

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular, or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Nickel, not alloyed**

Metal containing by weight at least 99% of nickel plus cobalt, provided that:

- i) the cobalt content by weight does not exceed 1.5%, and
- ii) the content by weight of any other element does not exceed the limit specified in the following table:

TABLE - Other elements

Element		Limiting content % by weight
Fe	Iron	0.5
O	Oxygen	0.4
Other elements, each		0.3

b) Nickel alloys

Metallic substances in which nickel predominates by weight over each of the other elements provided that:

- i) the content by weight of cobalt exceeds 1.5%,
- ii) the content by weight of at least one of the other elements is greater than the limit specified in the foregoing table, or
- iii) the total content by weight of elements other than nickel plus cobalt exceeds 1%.

LEAD AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) **Bars and rods**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

b) **Profiles**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

c) **Wire**

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

d) **Plates, sheets, strip and foil**

Flat-surfaced products (other than the unwrought products of heading No. 78.01), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Heading No. 78.04 applies, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

e) **Tubes and pipes**

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

1. In this Chapter the expression "refined lead" means:

Metal containing by weight at least 99.9% of lead, provided that the content by weight of any other element does not exceed the limit specified in the following table:

TABLE - Other elements

Element		Limiting content % by weight
Ag	Silver	0.02
As	Arsenic	0.005
Bi	Bismuth	0.05
Ca	Calcium	0.002
Cd	Cadmium	0.002

Fe	Iron	0.002
S	Sulphur	0.002
Sb	Antimony	0.005
Sn	Tin	0.005

Chapter 80

TIN AND ARTICLES THEREOF

Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) Bars and rods

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

b) Profiles

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

c) Wire

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross-section exceeds one-tenth of the width.

d) Plates, sheets, strip and foil

Flat-surfaced products (other than the unwrought products of heading No. 80.01), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including "modified rectangles" of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Headings Nos. 80.04 and 80.05 apply, *inter alia*, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

e) Tubes and pipes

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

Subheading Note.

1. In this Chapter the following expressions have the meanings hereby assigned to them:

a) Tin, not alloyed

Metal containing by weight at least 99% of tin, provided that the content by weight of any bismuth or copper is less than the limit specified in the following table:

TABLE - Other elements

Element		Limiting content % by weight
Bi	Bismuth	0.1
Cu	Copper	0.4

b) Tin alloys

Metallic substances in which tin predominates by weight over each of the other elements, provided that:

- i) The total content by weight of such other elements exceeds 1%; or
- ii) the content by weight of either bismuth or copper is equal to or greater than the limit specified in the foregoing table.

 - d) Abrasive materials on a support of base metal, provided that the articles have cutting teeth, flutes, grooves, or the like, of base metal, which retain their identity and function after the application of the abrasive.
2. Parts of base metal of the articles of this Chapter are to be classified with the articles of which they are parts, except parts separately specified as such and tool-holders for hand tools (heading No. 84.66). However, parts of general use as defined in Note 2 to Section XV are in all cases excluded from this Chapter.

 - p) Articles of Chapter 95.
2. Subject to Note 1 to this Section, Note 1 to Chapter 84 and to Note 1 to Chapter 85, parts of machines (not being parts of the articles of heading No. 84.84, 85.44, 85.45, 85.46 or 85.47) are to be classified according to the following rules:
 - a) Parts which are goods included in any of the headings of Chapters 84 or 85 (other than headings Nos. 84.85 and 85.48) are in all cases to be classified in their respective headings;
 - b) Other parts, if suitable for use solely or principally with a particular kind of machine, or with a number of machines of the same heading (including a machine of heading No. 84.79 or 85.43) are to be classified with the machines of that kind. However, parts which are equally suitable for use principally with the goods of headings Nos. 85.17 and 85.25 to 85.28 are to be classified in heading No. 85.17;
 - c) All other parts are to be classified in headings No. 84.85 or 85.48.
3. Unless the context otherwise requires, composite machines consisting of two or more machines fitted together to form a whole and other machines adapted for the purpose of performing two or more complementary or alternative functions are to be classified as if consisting only of that component or as being that machine which performs the principal function.
4. Where a machine (including a combination of machines) consists of individual components (whether separate or interconnected by piping, by transmission devices, by electric cables or by other devices) intended to contribute together

to a clearly defined function covered by one of the headings in Chapter 84 or Chapter 85, then the whole falls to be classified in the heading appropriate to that function.

5. For the purposes of these Notes, the expression "machine" means any machine, machinery, plant, equipment, apparatus or appliance cited in the headings of Chapter 84 or 85.
-

Chapter 85

**ELECTRICAL MACHINERY AND EQUIPMENT AND PARTS THEREOF;
SOUND RECORDERS AND REPRODUCERS,
TELEVISION IMAGE AND SOUND RECORDERS AND REPRODUCERS, AND
PARTS AND ACCESSORIES OF SUCH ARTICLES**

Notes.

1. This Chapter does not cover:

- a) Electrically warmed blankets, bed pads, foot-muffs or the like; electrically warmed clothing, footwear or ear pads or other electrically warmed articles worn on or about the person;
- b) Articles of glass of heading No. 70.11; or
- c) Electrically heated furniture of Chapter 94.

2. Headings Nos. 85.01 to 85.04 do not apply to goods described in heading No. 85.11, 85.12, 85.40, 85.41 or 85.42.

However, metal tank mercury arc rectifiers remain classified in heading No. 85.04.

3. Heading No. 85.09 covers only the following electro-mechanical machines of the kind commonly used for domestic purposes:

- a) Vacuum cleaners, floor polishers, food grinders and mixers, and fruit or vegetable juice extractors, of any weight;
- b) Other machines provided the weight of such machines does not exceed 20 kg.

The heading does not, however, apply to fans or ventilating or recycling hoods incorporating a fan, whether or not fitted with filters (heading No. 84.14), centrifugal clothes-dryers (heading No. 84.21), dish washing machines (heading No. 84.22), household washing machines (heading No. 84.50), roller or other ironing machines (heading No. 84.20 or 84.51), sewing machines (heading No. 84.52), electric scissors (heading No. 85.08) or to electro-thermic appliances (heading No. 85.16).

4. For the purposes of heading No. 85.34 "printed circuits" are circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the "film circuit" technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semiconductor elements).

The term "printed circuits" does not cover circuits combined with elements other than those obtained during the printing process. Printed circuits may, however, be fitted with non-printed connecting elements.

Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in heading No. 85.42.

5. For the purposes of headings Nos. 85.41 and 85.42:

A) "Diodes, transistors and similar semiconductor devices" are semiconductor devices the operation of which depends on variations in resistivity on the application of an electric field;

B) "Electronic integrated circuits and microassemblies" are:

- a) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, interconnections, etc.) are created in the mass (essentially) and on the surface of a semiconductor material (doped silicon, for example) and are inseparably associated;
- b) Hybrid integrated circuits in which passive elements (resistors, capacitors, interconnections, etc.), obtained by thin- or thick-film technology, and active elements (diodes, transistors, monolithic integrated circuits, etc.) obtained by semiconductor technology, are combined to all intents and purposes indivisibly, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include discrete components;
- c) Microassemblies of the moulded module, micromodule or similar types, consisting of discrete, active or both active and passive, components which are combined and interconnected.

For the classification of the articles defined in this Note, headings Nos. 85.41 and 85.42 shall take precedence over any other heading in the Classification which might cover them by reference to, in particular, their function.

6. Records, tapes and other media of heading No. 85.23 or 85.24 remain classified in those headings, whether or not they are presented with the apparatus for which they are intended.

CLOCKS AND WATCHES AND PARTS THEREOF

Notes.

1. This Chapter does not cover:
 - a) Clock or watch glasses or weights (classified according to their constituent material);
 - b) Watch chains (heading No. 71.13 or 71.17, as the case may be);
 - c) Parts of general use defined in Note 2 to Section XV, of base metal (Section XV), or similar goods of plastics (Chapter 39) or of precious metal or metal clad with precious metal (generally heading No. 71.15); clock or watch springs are, however, to be classified as clock or watch parts (heading No. 91.14);
 - d) Bearing balls (heading No. 73.26 or 84.82, as the case may be);
 - e) Articles of heading No. 84.12 constructed to work without an escapement;
 - f) Ball bearings (heading No. 84.82); or
 - g) Articles of Chapter 85, not yet assembled together or with other components into watch or clock movements or into articles suitable for use solely or principally as parts of such movements (Chapter 85).
2. Heading No. 91.01 covers only watches with case wholly of precious metal or of metal clad with precious metal, or of the same materials combined with natural or cultured pearls, or precious or semi-precious stones (natural, synthetic or reconstructed) of headings Nos. 71.01 to 71.04. Watches with case of base metal inlaid with precious metal fall in heading No. 91.02.
3. For the purposes of this Chapter, the expression "watch movements" means devices regulated by a balance-wheel and hairspring, quartz crystal or any other system capable of determining intervals of time, with a display or a system to which a mechanical display can be incorporated. Such watch movements shall not exceed 12 mm in thickness and 50 mm in width, length or diameter.
4. Except as provided in Note 1, movements and other parts suitable for use both in clocks or watches and in other articles (for example, precision instruments) are to be classified in this Chapter.
